

Example 28 x 76 Mobile Home

$W = \frac{1}{2}$ of the width of the home, ft.

$D =$ distance of pad from the edge of the home = 10 ft

$d =$ Depth of the soil at the center of the home, inches.

$$d = (W + D) / 2$$

example:

Example

A doublewide home is 28 ft wide by 76 ft long. The dimensions of the soil pad for this home will be

28 ft (width of home) + 20 ft (10 ft on each side of the home) = 48 ft wide

76 ft (length of home) + 20 ft (10 ft on each end of the home) = 96 ft long

Dirt pad

Calculation for the depth of soil at the center of the home for a pad with $\frac{1}{2}$ inch per foot slope :

$W = 14$ ft

$D = 10$ ft

$d = (14 + 10) / 2 = 24 / 2 = 12$ inches Depth in Center

Use "red, sandy, clay"
